

RouteLogic Velocity

INITIATIVE ROADMAP · PILOT PHASE

Team · 2 engineers · 1 designer · 1 CS lead

Pilot · 4 weeks · 3 accounts

Target · compliance checks → ~9 min

Primary metric: compliance check time ↓ to ~9 min ·

Persona: experienced driver who has given up trusting it ·

Guardrail: dispatch board & route optimizer daily usage must not drop

Quadrant key — Quick win Major project Fill-in Time sinker

NOW Pilot · weeks 1-4 · 3 accounts

2 features

B1 One-Click Compliance Checklist Quick win

Directly attacks the 14.6-min compliance moment of misery; pre-fill reuses existing data — low build cost for maximum primary metric impact.

B5 Step Progress Indicator Quick win

Minimal dev cost; restores the experienced driver's sense of control within the existing workflow and preserves dispatch-board behaviour — no regression risk.

NEXT GA Release · weeks 5-8

2 features

B3 Shift Handoff Wizard Major project

The 6.8-min saving is real, but building a reliable multi-step wizard with state persistence risks the dispatch-board guardrail if it shares the same UI surface.

B6 Driver Alert Notifications Quick win

Directly counters "tool does not provide timely, correct information"; push infra is usually low effort if data triggers already exist in the route optimizer.

LATER Backlog · post-GA

3 features

B2 **Smart Daily Report Auto-Fill** Major project

High value for the persona but AI-generated field population requires data-pipeline work that will strain a 2-engineer pilot team.

B4 **Mobile-First Coordinator Dashboard** Major project

Addresses the complexity axis of the moment of misery, but a full responsive redesign is a multi-sprint rebuild — too risky for a 4-week pilot with a guardrail on daily dispatch usage.

B7 **Contextual AI ETA Display** Time sinker

11% adoption signals the persona has already stopped trusting it; rebuilding ML confidence takes far more than 4 weeks and risks eroding the primary metric benchmark.

CUT LIST Not in scope for Velocity – revisit at next initiative review

B8 ~~Fleet Analytics Manager View~~ Time sinker

Serves an exec persona, not the experienced driver; does nothing for compliance time and pulls designer + engineer capacity away from the primary metric.

B9 ~~Compliance Audit Trail Export~~ Fill-in

PDF export is a low-effort admin convenience; useful for the CS lead but doesn't move the primary metric.

B10 ~~In-App Coordinator Training~~ Fill-in

Targets new coordinators, not the experienced driver persona; could help CS lead during onboarding of the 3 accounts but is the wrong lever for the moment of misery.
